

The Mycro Hunter App

Mycro Hunter is a mobile application where the focus lies on crypto-related jobs for bounty hunters and growth hackers. Every blockchain project in the crypto space is looking for a wider audience to address. Token sale startups and existing projects like protocols or exchanges are always looking for more awareness, investors, users and/or customers. Bounty and growth hacker campaigns are a unique tool, especially in the crypto space. Within these campaigns, millions of people are ready to promote projects they like, but how are they assured of receiving their well-earned tokens?

The Problem

Currently, there is a major lack of trust in this industry and that is where Mycro Hunter comes in.

Bounty hunters and growth hackers are often scammed by projects and never receive their well-earned coins or tokens.

Projects are often scammed by people who are not trustworthy and legit. These scammers are trying to get coins/tokens without working for it.

The Solution

Mycro Hunter. The world's first trustless bounty and growth-hacking mobile application.

100% payment guarantee Complete bounty or growth hacking budgets are paid into the Mycro smart contract before the campaign starts. This means 100% transparency with payment guarantee for all participants.

True reputations Hunters who participate in many campaigns and perform lots of tasks, will be acknowledged for their high performance. This reputation will be transferable across all applications that use the Mycro Protocol. Also, scammers are banned completely from all applications that use the Mycro protocol.

The Role of Mycro Token (MYO):

Staking

- Hunters/Hackers need a certain amount of MYO in their wallet in order to participate in campaigns.
- Projects need a certain amount of MYO in their wallet to onboard new Hunters/Hackers to their campaign.

Payment

- Projects are able to pay their hunters with MYO during the campaigns.

Rewarding

- Projects and Hunters/Hackers receive MYO after they have evaluated each other. The reward is distributed out of the reward pool.

Roadmap

Q4 2020

- Development Facebook campaigns
- Payment system
- Decentralized Mycro Wallet
- Testing
- Bugfixing

Q1 2021

- Launch Mycro Hunter (full version)
- Active campaigns
- Onboarding new projects

Q2 2021

- Introducing new social media campaigns (Twitter, Instagram and/or Telegram)
- Push notifications
- Refer-a-friend program
- Unlock wallet with face ID/fingerprint

Q4 2021

- Automatic register process for projects
- Automatic campaign creation on Mycro Hunter
- Reputation system
- Reward system
